Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 2 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

***DETAILED ACTION***

1. This communication is in response to applicant's communications filed 11/30/2000 in the application of Roberson et al. for a "Method and apparatus for transporting network management information in a telecommunications network". The preliminary amendment filed 02/07/2003 has been entered and made of record. Claims 1-31 are pending in the application.

***Election/Restriction***

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-16 and 30-31 drawn to the Multiple levels of multiplexing to form a multiplex hierarchy: Subject matter having more than one multiplexing stage, including details of methods or apparatus for formatting, converting, combining, or distributing information signals for transmission or reception via more than one time or frequency channel, and wherein all input channels have same amount of information transmitted per unit time, classified in **class 370, subclass 541**.
- II. Claims 17-29 drawn to the Bridge or gateway between networks: Subject matter having a device for interconnecting two or more networks at a media-access level of a data-link layer; having a switching architecture in which a plurality of switch

nodes are provided such that the switching function is spread out over a geographical area, and wherein information data to be switched is organized with one or more bytes preceded by an identification information indicative of a source or destination station, classified in **class 370, subclass 401**.

The inventions are distinct, each from the other because of the following reasons: Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as the use of virtual tunnel for transporting network management information, which does not include the particular listed of the invention I, such as the Multiple levels of multiplexing to form a multiplex hierarchy in SONET frame network. See MPEP ' 806.05(d).

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, and the search required for Group I is not required for Group II or III, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37.CFR 1.143).

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).
